

Obsidian Edge NVR

Network Video Recorder

Robust NVR Appliance Optimized For Unattended Remote Deployment

The Obsidian Edge NVR is a robust computing appliance ready for standalone video security applications. Two models are available supporting small and medium sized deployments. This Network Video Recorder appliance is perfect for unattended deployments due to its file protection system, remote monitoring & management and operational persistence. It is based on Windows 10 IoT Enterprise so there is no practical limitation to available software and applications. It's embedded programming means the file system is protected and bulletproof for the rigors of remote installations. The NVR uses Milestone XProtect® Express Video Management Software. No special training is required and the system is turn-key ready for quick deployment. When coupled with Precision Care and EdgeRMM services the system is virtually unstoppable.
